

Unlocking possibilities, one tag at a time: your RFID solution provider

AIMS Asset Inventory Management Solution

Setting the Standard for Asset Management

AIMS is the RFID industry's most cost effective, flexible and scalable asset management solution.

Solution Features

Asset Tracking

Identify the location of each any every item in real-time without having to see it physically - track inventory from the manufacturer, to the DC, to the store, etc. This results in 100% data integrity, giving you the ability to locate your assets instantly.

Asset Maintenance Monitoring

Monitor your product's maintenance status throughout its specific operational life cycle. For those assets that require maintenance, refurbishment, or calibration, the AIMS™ solution can provide you with alerts and notifications when it is time for the asset's scheduled maintenance.

Asset Data Capture & Itemization

AIMS™ links assets' individual item information with unique RFID numbers, resulting in easy asset differentiation and data capture during RFID reads.

Inventory Reconciliation

Reconciling actual inventory against systemic inventory is a very time consuming, error prone, and expensive process. Even when using bar code readers, the human element and direct labor costs are an inherently pricey aspect of managing inventory. With AIMS, you can instantly compare your systemic inventory against stock on hand, allowing you to replenish accurately.

People Identification, Tracking, & Access Control

People tracking coupled with location systems (RTLS) can provide security in restricted areas, allow access to events or zones, and track activity in defined areas. This solution is ideal for use in highly secure areas requiring a rapid response during an emergency, as you can identify the location of key personnel and notify them for immediate response.

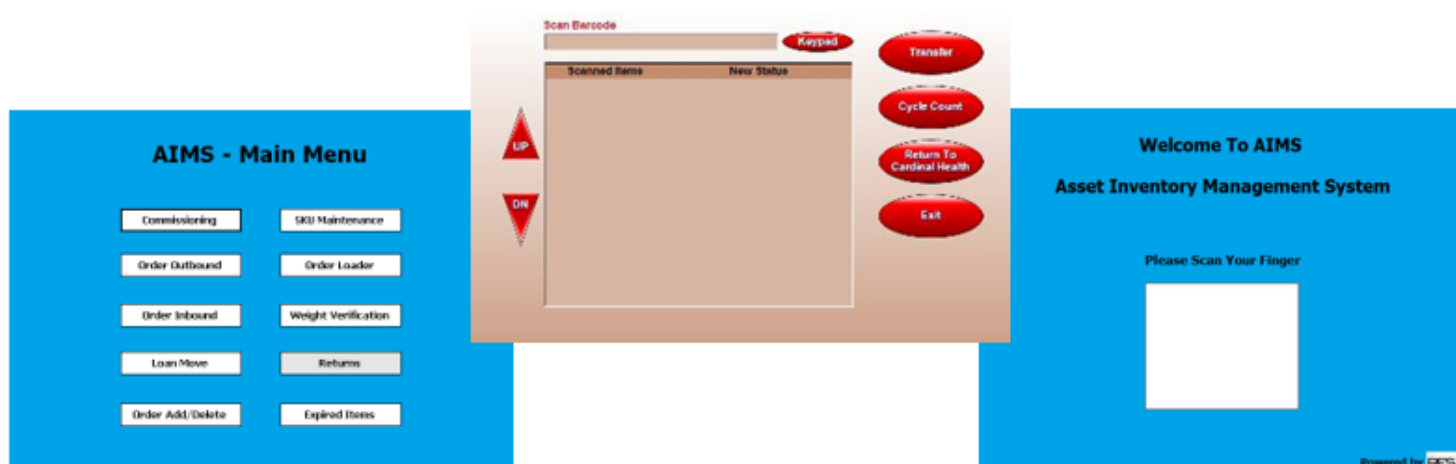

Kitting Operations (Multi-Packs)

Kitting is an assembly and manufacturing process in which individually separate but related items are grouped, packaged, and supplied together as one unit. The AIMS solution allows you to keep track of all items used in the kitting process and alerts you when items are separated.

AIMS Asset Inventory Management Solution

AIMS makes it easy to cost effectively manage assets, objects, kits, products, & people.
Our RFID solutions will take you to the next level of asset management.

Solution Benefits

- Eliminate Human Errors in Asset Management & Tracking
- Reduce or Eliminate Labor Costs
- Increase End Customer Satisfaction
- Improve Product Delivery Quality
- Improve Audit & Compliance Processes
- Verify All Items in a Kit Prior to Production or Distribution
- 100% Accuracy on Asset Location, Quantity, & Item Type

Solution Components

- Easy to Use Interface, Limited Change Management
- Built In Alerts & Authorization Control – Biometrics, Voice, & RFID Technology Combinations Available
- Warehouse Management, Order Management, Shipment Verification
- Integration with Existing ERP/ Other Internal Applications
- Light IT Footprint; Requires Limited Resources
- PO Management, Invoicing via Sage
- Active Directory Authentication Integration
