

Unlocking possibilities, one tag at a time: your RFID solution provider

RIMS Retail Inventory Management Solution

The Industry's Premier Inventory Management Solution

RIMS is the first inventory management system on the market that provides an end-to-end solution, starting with your vendors & ending with your bag carrying customers.

Solution Features

Inventory Tracking

RIMS allows you to identify the location of each and every item without having to see it physically - track inventory from the manufacturer, to the DC, to the store. But why stop there? RIMS also helps find missing items and eliminates shrinkage. Our system even makes taking inventories quick and accurate and painless.

Automated Check Out

With RIMS, check out takes seconds – simply press a single button to register many items in only one scan. The system then stores the transaction data – what was sold, when it was sold, for how much, etc.; which eliminates return process issues (no sales receipt, no problem!)

Item Restocking

Built in, configurable alerts notify you to low inventory levels. RIMS also gives you the ability to create customized sales floor restocking reports – style, color, size level, etc.

Inventory Reconciliation

Reconciling actual inventory against systemic inventory is usually a very time consuming, error prone, and expensive process, even when using bar code readers. That's why our solution takes out the human element and allows you to instantly compare your systemic inventory against stock on hand. RIMS eliminates inventory discrepancies!

Employee Management

People tracking, coupled with location systems (RTLS), will allow you to track employee activity within the store. Knowing which employees are where at all times not only gives you the ability to maximize customer service, but also eliminates unreliable timecards and schedule discrepancies.

Customer Identification

Loyalty cards store customer data and notify personnel when the customer has entered the store. Employees immediately have access to the card's data, enabling them to provide a personalized experience to loyalty card members.

RIMS Retail Inventory Management Solution

Keep your company ahead of the game! Our RIMS inventory software allows you to increase sales, save money, and improve customer satisfaction, without any changes to your existing system.

Solution Benefits

- Eliminate Human Errors in Inventory Management & Tracking
- Audit All Inbound & Outbound Boxes - 100% Accuracy
- Audit Store Receipts - 100% Verification
- Eliminate Out of Stock at Store & Warehouse
- Prevent Product Shrinkage - Both Internal & External
- Avoid POS Mistakes
- Increase End Customer Satisfaction with Faster Check Outs
- 100% System Accuracy on Product Location, Quantity, & Item Type
- Manage Returns More Efficiently
- Easily Monitor Employees & Manage Schedules
- Provide a Personalized Customer Service Experience for Your Loyalty Card Members

Solution Components

- Little to No Change Management
- Easy to Use Interface
- Built In Alerts
- Integration with Existing ERP/ Inventory/Supply Chain Applications
- Light IT Footprint; Requires Limited Resources
- Active Directory Authentication
